FACTS ABOUT THE SUN

- a. Age: 4.6 Billion Years.
- b. Star type: Yellow Dwarf (G2V).
 - c. Diameter: 1,392,684 km (109 x Earth).
 - d. Mass: 333,060 x Earth.
- e. Surface temperature: 5500 °C.
- f. Internal temperature: 15 million °C.
- g. Composition: Hydrogen (72%), and helium (26%).
- h. Energy generation: Thermonuclear fusion using hydrogen as fuel.
- i. Energy production: Equal to 100 billion tons of dynamite per second.
- j. Energy output: Electromagnetic radiation.
- k. Electromagnetic radiation emitted by Sun = Solar energy, solar radiation or light.
- Visible solar radiation = Sunlight, visible light.
- m. Sunlight: Takes 8 minutes to reach Earth (150 million km).
- n. Wavelengths between red and violet are visible to the human eye.
