HOW TO SEE A RAINBOW

Looking for a rainbow ?

Stand with the sun on your back. Look ahead towards falling rain.

Rainbows appear high in the sky early morning and evening. In the middle of the day they may be too low to see.

The angle between you, each individual raindrop and the sun determines which raindrops form your rainbow.

The rainbow seen by a person standing next to you is produced by different raindrops from the ones in your own.
